

Real Estate

in Czechia

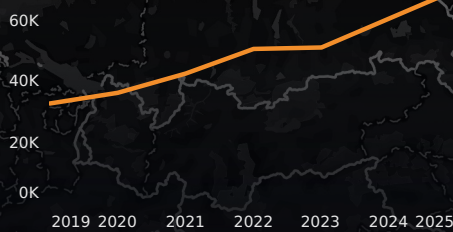

Click on a district within the map to see detailed insights

Region: Olomoucký kraj

Average price per square meter

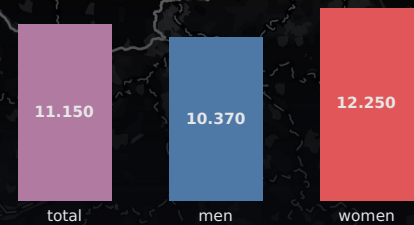

Yearly average prices per square meter within region

TOP 5 municipalities with highest average home prices per square meter within selected district

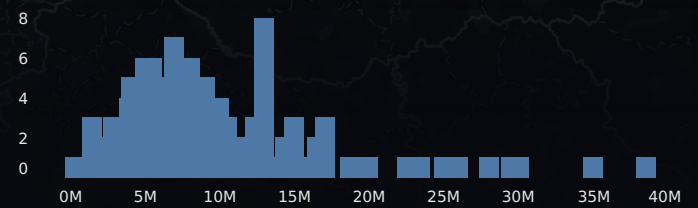

Home prices in this region are equal approximately 10,370 to 12,250 years of the average local income

Average price per square meter by apartment layout within selected district

The number of properties grouped by their price within the selected region

This dashboard presents average real estate prices and income data across the Czech Republic. Time series for home prices per m² and salaries are aggregated at the regional level to show the relationship between income and property prices. Municipal data shows average prices per m². Historical data comes from the ČÚZK database, which does not include 2024. Income data is from the Czech Statistical Office (ČSÚ). Data for 2025 was scraped from Sreality.cz on July 11 and reflects a snapshot, not a full-year average. The dashboard demonstrates the author's skills in web scraping, data processing, and visualization; 2025 data is included to showcase technical abilities rather than provide a full market overview.
